MAKING "HISTORY"

"You've made history through your role in the Internet industry. You have a chance to make history again by inspiring the next generation of inventors"

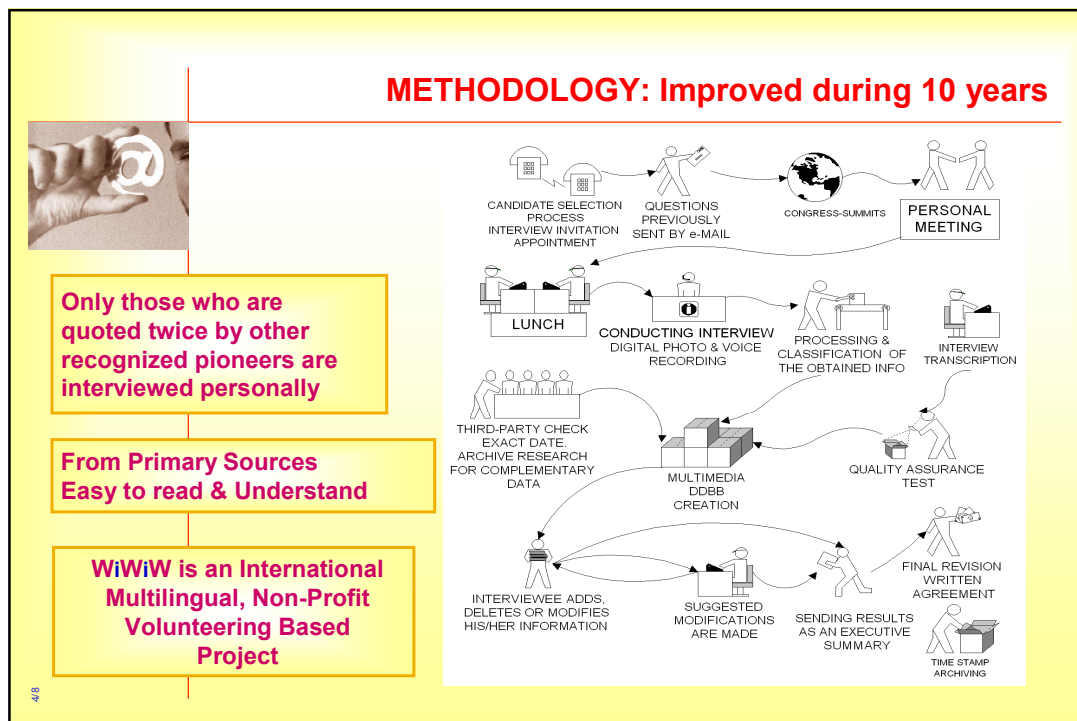

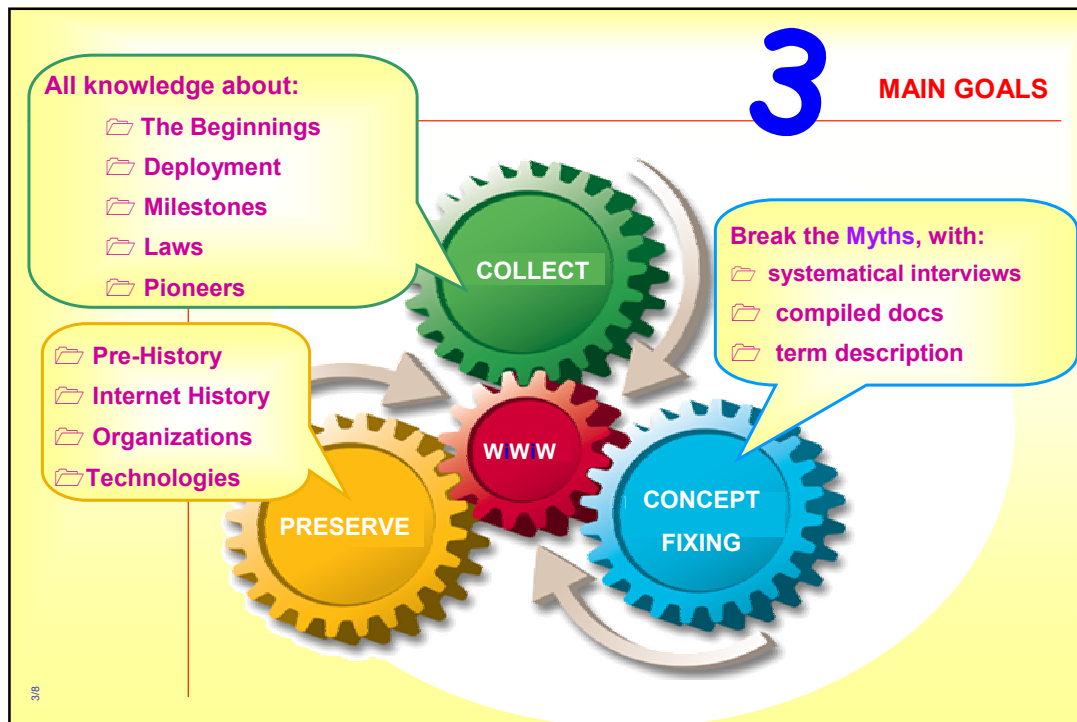

We have now a unique opportunity to preserve the technological ideas and achievements that have transformed the world. In only 10 years.

This shift has happened so rapidly that we have both the luxury of perspective and the time to record the personal experiences of those involved.

However, many of the pioneers are now in their 60's and 70's, so we can't wait much longer if we want first - hand accounts¹.

Reproduced from the Foreword of the Computer History Museum Inauguration June 2003.

Scientific Advisors, & Mentors

Vint Cerf

Gordon Bell

Fred Baker

WHAT ARE WE DOING?

- Collecting the Stories of the Internet pioneers, on digital audio format to preserve it for future generations to know. Wouldn't it be great to hear Thomas Edison or Graham Bell voices today?
- Designing and creating a huge timeline-sorted, open source repository to make possible browsing between the people who most contributed to the internet. In every single country, same method.
- Their voices, Text, Videos, and Old Pictures are conveniently archived and sorted.

SOME of the 140+ so far INTERVIEWED PIONEERS

Posthumous

Internet is for everyone

We need unknown stories, the important old e-mails which marked a milestone, group pictures, anecdotal situations, and, most importantly, your financial support to boost this project to preserve our collective internet story.

FOREWORD TO THE WORK

TCP

ARPANET

WWW

In this dissertation, Andreu Veà blazes a trail for historians to follow.

The history and pre-history of the Internet's creation and evolution will occupy the attention of serious scholars and historians for many years in the future. I am convinced that Dr. Veà's contribution will represent an important landmark in the field. Understanding the history and rationale for the evolution of infrastructure fills a critical need for planning. One needs to know why things work or do not work and Dr. Veà provides an extraordinary menu of specifics from which many lessons may be drawn.

Vint Cerf

I hope you will find this work as interesting and useful as I have.

Internet Pioneer, & MCI VP

To: '**David McAuley**'

CC: '**Lynn St.Amour**'

Subject: RE: [isoc-advisory-council] Project Funding Important Announcement

David, that's great news. I have a proposal (actually this is from Andreu Veal who is an engineer turned historian at Stanford). It is a lot more than \$10K but I would like you to see his proposal anyway because it is the sort of project that ISOC should be extremely interested in, and it is something that can involve all the chapters. It has to do with the history of the Internet and interviews with an increasing number of pioneers around the world. He has done 150 interviews so far. I will encourage him to send you this project description.
